## Abstract

The purpose of this research is to determine the effect of transformational leadership in the creative behavior of decision makers in the Directorate of Public Traffic. The research problem was formulated in several questions focused on the statement of impact among its variables. The research was based on a main hypothesis, which was subjected to several tests to ascertain its validity. In order to achieve the objectives of the research, a questionnaire was developed which included (30) items to collect the data from the intentional sample of the research, with a total of (70) questionnaires, and the number of questionnaires valid for the analysis (67) of the total distributed questionnaires. The statistical program (SPSS) was used to analyze the data. The results are the most important: to drive the transformational leadership (ideal influence, inspirational motivation, intellectual arousal, individual legalism), which together have a significant effect on the creative behavior of the research sample members, and thus increase the attention to the positive strengths that form the transformational leadership contributes to the support and development of creative behavior of the organization, in question, to keep pace with progress in their field.

*Keywords: transformational leadership, creative behavior*

## 1. Introduction

The rapid changes in the business environment have forced the organizations to abandon their traditional management methods, and seek new creative management methods. Organizations no longer need managers, as much as they need leaders capable of persuading employees to bring about changes, and meet the demands of globalization, by focusing on the human element, which is the core of the creative process, and the creation of all appropriate administrative climate for work.

From here, it appeared in the modern administrative directions, which Loftus referred to, including transformational leadership patterns. This research was aimed at shedding light on the pattern of transformational leadership and its impact on creative behavior in the Directorate of Public Traffic, one of the formations of the Iraqi Ministry of Interior for the importance of the services it provides in the daily lives of citizens. Like other organizations, it is rapidly evolving, necessitating a reconsideration of leadership patterns, and a shift to a leadership style capable of creating creative energies, such as transformational leadership (Loftus et al, 1978)

## 2. Theoretical Side of Research

### 2.1. Transformational Leadership

#### 2.1.1. The Concept of Transformational Leadership

The researchers have been studying the concept of transformational leadership in recent times, including Eisenbeiss, Kearney and Gebert (Eisenbeiss et al.; 2008 Kearney and Gebert, 2009). It was found that this concept is effective in terms of increasing subordinates' performance expectations (Bass, 1985), and shifting their personal values and self-concept to higher levels of needs and aspirations, according to Avolio, Cheung and Wong (Avolio, 1994; Cheung & Wong, 2011). Shibu defined it as "a leadership style that inspires followers to transcend personal benefit, and transform it to the benefit of the organization, and is capable of influencing the interests of subordinates" (Shibu & Darshan, 2011). Belle referred to it as "a process based on motivating followers to override personal interests at the expense of the interests of the team or the organization" (Belle, 2013).

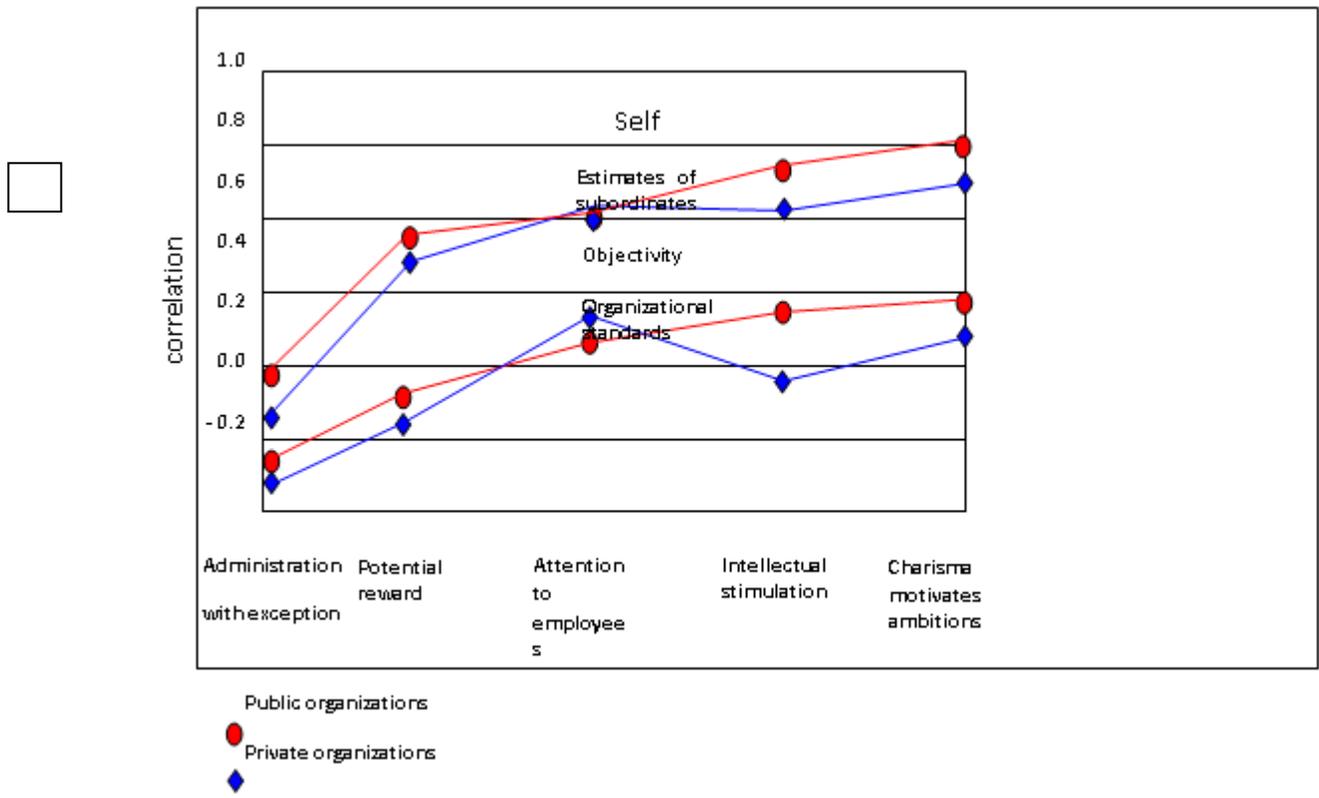

Sudan defined it as "that leadership style that illustrates the influence of the leader in the subordinates, in terms of motivation and inspiration, and push them to master the work in line with the objectives of the organization" (Sudan, 2014).

The essence of transformational leadership is a process of social change, and transformational leaders rely on the multiplier effect of positive social change in their organizations, and commit themselves to creating a collective vision of purpose by building leadership and mentoring throughout the organization. Thus, transformational leaders create educated organizations capable of growing, and adapting to changing demands in the environment, in which they operate. Adaptability and responsiveness to a complex, often unpredictable, social environment cannot be delegated, and can only be modeled in behavior that promotes trust and empowerment (Block, 2004).

**2.1.2. Features of the Transformational Leader**

The leader has special characteristics and abilities, distinguishing him from others that may be physical, mental, or psychological (Daft, 2008). Transformational leaders play a key role in shaping the values and cultures of organizations, but can only perform this role by showing their personal and interactive skills.

Figure (1) shows the correlation between all elements of transformational leadership and objective and subjective measures of performance.

Source: (Lowe et al., 1996)

In the above tests, we show that the main hypothesis has been achieved that: (Transformational leadership affects morally and positively in creative behavior). The incremental increase in the dependent variable can also be predicted if the observed organization wishes to increase the amount of the independent variable by means of the econometric regression equation ( $Y = \alpha + \beta * X$ ).

#### 4. Results

1. Transformational leadership contributes significantly to the development of creative behavior. This indicates that the organization in question, through its leaders in transformational leadership, has achieved more developments and support for the development of creative capacities as well as the promotion of creativity.
2. The dimensions of transformational leadership (ideal influence, inspirational motivation, intellectual consultation, individual consideration) have a significant effect on the creative behavior of the research sample members. Thus, increasing attention to the positive strengths of transformational leadership contributes to supporting and developing creative behavior in the organization, in order to keep abreast of progress in their field of work.
3. There are significant differences in the variable of the transformational leadership in the investigated organization, indicating that the members of the research sample are different, due to the different nature of the work between the technicians and the administrators, as well as the difference in the level of performance and the achieved goals.
- 4 - There are significant differences in the variable of creative behavior in the organization investigated, and this indicates that the individuals in the sample of the research are different in the level of their creativity, because the ingredients of creativity vary from person to person, as well as creativity at multiple levels.
